

2016 Projected Crop Cost and Return Estimates, Valencia and Southern Bernalillo Counties

Part-Time Farms

Jerry M. Hawkes, James D. Libbin, Newt McCarty and John Garlisch

Cost and return estimates for irrigated crops in Valencia and southern Bernalillo Counties are presented in this report. These estimates were gathered from a panel of local producers, state and federal agency personnel, and others interested in crop production. They are estimates for a representative farm with above-average management. These estimates will not fit any particular farm and should be adjusted to match individual businesses and operating conditions.

The representative part-time farm contains 30 acres. The crops grown are:

- Alfalfa
- Oat hay
- Sorghum hay
- Green Chile
- Jalapeños

Primary Information Tables

Table 1 is an acreage summary.

Table 2 lists the basic cost assumptions for primary inputs.

Table 3 shows overhead cost information.

Table 4 lists the machinery complement for this representative farm. It also lists the hours of annual use, number, current market value and associated costs for each item. All machinery is assumed to be used; large tractor units are approximately one to

seven years old; small tractor units average about 15 to 20 years of age; tillage, irrigation and miscellaneous equipment is seven years old on average; and harvest and planting equipment and trucks were assumed to be about five years old.

Individual Crop Estimates

Tables 5 through 10 are the cost and return estimates for the individual crops. Definitions and methods are explained on the back side of this page.

Summaries

Table 11 is a side-by-side summary of the individual crop estimates. Table 12 pulls together all of the individual estimates into a whole-farm summary.

Further Explanation and Other Estimates

The final two pages of this report provide a glossary of the terms used and a few ideas about how to modify these budgets to better fit your farm.

Contact your County Extension Agent or an Extension Farm Management Specialist at NMSU for a complete list of available crop cost and return estimates.
