

2017 Projected Crop Cost and Return Estimates, Quay County

Arch/Hurley Conservancy District Sprinkler - Irrigated Farms

Jerry M. Hawkes, James D. Libbin and James A. Lucero

Cost and return estimates for sprinkler - irrigated and a beef cow herd in the Arch/Hurley Conservancy District of Quay County are presented in this report. These estimates were gathered from a panel of local producers, state and federal agency personnel, and others interested in crop production. They are estimates for a representative farm with above-average management. These estimates will not fit any particular farm and should be adjusted to match individual businesses and operating conditions.

The representative farm contains 600 acres. The crops grown are:

Alfalfa
Grain Sorghum
Wheat

Primary Information Tables

Table 1 lists an acreage summary.

Table 2 lists the basic cost assumptions for primary inputs.

Table 3 shows overhead cost information.

Table 4 shows well and pump characteristics and pumping costs for four fuel types. Tables 6 through 9 assume the use of electricity as the primary fuel source, but irrigation costs can be modified by substituting the costs per acre-inch listed at the bottom of Table 4.

Table 5 lists the machinery complement for this representative farm. It also lists the hours of annual use, number, current market value and associated costs for each item. All machinery is assumed to be used; large tractor units are approximately one to seven years old on average; and harvest and planting equipment and trucks were assumed to be about five years old.

Individual Crop Estimates

Tables 6 through 9 are the cost and return estimates for the individual crops and the livestock herd. Definitions and methods are explained on the back side of this page.

Summaries

Table 10 is a side-by-side summary of the individual crop estimates. Table 11 pulls together all of the individual estimates into a whole-farm summary.

Further Explanation and Other Estimates

The final two pages of this report provide a glossary of the terms used and a few ideas about how to modify these budgets to better fit your farm.

Contact your County Extension Agent or an Extension Farm Management Specialist at NMSU for a complete list of available crop cost and return estimates.
