

2023 Actual Crop Cost and Return Estimates, Full Time Farm, Valencia, and

Southern Bernalillo Counties

John Garlisch, Bernalillo County Agriculture Agent, Mark Marsalis,

Extension Specialist, Pilja Vitale, Extension Economist, and Madhav

Regmi, Assistant Professor

Cost and return estimates for the crops full time farm in the Valencia and Southern Bernalillo Counties are presented in this report. These estimates were gathered from a panel of local producers, state and federal agencies, and others input industries in crop production. They are estimates for a representative farm with above-average management. These estimates will not fit any particular farm and should be adjusted to match individual businesses and operating conditions. We thank those individuals who provided data to make this report complete.

The representative full-time farm contains 100 acres in the flood irrigated land in the Valencia and Southern Bernalillo counties. The crops grown are:

- Alfalfa Establishment
- Alfalfa
- Small Grain Hay
- Sorghum Hay
- Corn Silage

Primary Information Tables

Table 1 lists the basic cost assumptions for primary inputs.

Table 2 shows overhead cost information for Valencia and Southern Bernalillo Counties.

Individual Crop Estimates

Tables 5 through 9 are the cost and return estimates for the individual crops. Definitions are explained on the link of understanding of NMSU enterprise budget in this website.

Summaries

Table 10 is a side-by-side summary of the individual crop estimates. Table 11 is a whole farm summary.

Further Explanation and Input Source reference

Input data sources other than producers and local input vendors: Interest rate referred to American Agcredit, and part of energy prices referred to <https://www.eia.gov/outlooks/steo/> (short-term energy outlook).

Contact Extension Economist at NMSU for a complete list of available crop cost and return estimates.
