2024 Actual Cost and Return Estimates, Curry County -Sprinkler

Wheat and Grain Sorghum Farm

Lindsay Keller, Curry County Agricultural Extension Agent, Pilja Vitale, Extension Economist, and Madhav Regmi, Associate Professor

Cost and return estimates for sprinkler crops in Curry County are presented in this report. These estimates were gathered from a panel of local producers, state and federal agencies, and other input industries in crop production. They are estimates for a representative farm with above-average management. These estimates will not fit any particular farm and should be adjusted to match individual business and operating conditions. We thank those individuals who provided data to make this report complete.

The representative farm contains 640 acres in the Sprinkler irrigated land of Curry County. The crops grown are:

Wheat
Grain Sorghum

Primary Information Tables

Table 1 lists acreage and water use summary.

Table 2 lists the basic cost assumptions for primary inputs.

Table 3 shows overhead cost information.

Individual Crop Estimates

Tables 6 through 7 are the cost and return estimates for the individual crops. Definitions are explained on the link of understanding of NMSU enterprise budget in this website.

Summaries

Table 8 is a side-by-side summary of the individual crop estimates. Table 9 pulls together all the individual estimates into a whole-farm summary.

Further Explanation and Input Source Reference

Input data sources other than producers and local input vendors: Interest rate referred to Farm Credit of New Mexico, part of energy prices referred to https://www.eia.gov/outlooks/steo/ (short-term energy outlook).

Contact your County Extension Agent and Extension Economist at NMSU for a complete list of available crop cost and return estimates.

Released: March 2025
