2025 Actual Crop Cost and Return Estimates, Carlsbad Basin, Eddy County

Pilja Vitale, Extension Economist; Stacie Chavez, Eddy County/Chavez County Farm Service Agency; Madhav Regmi, Associate Professor; Wayne Shockey, Eddy County Agricultural Agent

Cost and return estimates for crops in the Carlsbad Basin area of Eddy County are presented in this report. These estimates were gathered from a panel of local producers, state and federal agencies, and other input industries in crop production. They are estimates for a representative farm with above-average management. These estimates will not fit any particular farm and should be adjusted to match individual businesses and operating conditions. We thank those individuals who provided data to make this report complete.

The representative farm contains 200 acres in the flood irrigated land of Carlsbad Basin in Eddy County. The crops grown are:

- Alfalfa Establishment
- Alfalfa
- Triticale
- Sudan
- Picker Cotton
- Stripper Cotton
- Red Chile

Primary Information Tables

Table 1 lists acreage and water use summary.

Table 2 lists the basic cost assumptions for primary inputs.

Table 3 shows overhead cost information.

Individual Crop Estimates

Tables 6 through 12 are the cost and return estimates for the individual crops. Definitions are explained on the link to understanding of NMSU enterprise budget on this website.

Summaries

Table 13 is a side-by-side summary of the individual crop estimates. Table 14 pulls together all of the individual estimates into a whole-farm summary.

Further Explanation and Input Source reference

Input data sources other than producers and local input venders: Interest rate referred to American AgCredit at Las Cruces, and part of energy prices referred to https://www.eia.gov/outlooks/steo/ (short-term energy outlook).

Contact your County Extension Agent and Extension Economist at NMSU for a complete list of available crop cost and return estimates.

Released: April 2026
